

# HUIS DIGITAL LLC — CAPABILITY STATEMENT

SPECIALIST SUBCONTRACTOR — WEB/APP DEVELOPMENT & MODERNIZATION

MINORITY-OWNED • MISSION-DRIVEN

Role: Specialist subcontractor for web/app development & modernization

Business Type: 100% minority-owned small business

HQ: New York City, NY

## COMPANY OVERVIEW

Huis Digital LLC is a small, senior custom software and web development firm focused on mission-critical web applications, portals, integrations, and data-driven tools. We frequently support government and public-sector programs as a subcontractor, owning discrete workstreams end-to-end and integrating cleanly into prime contractors' delivery frameworks.

## CORE CAPABILITIES

- **Custom web applications & portals**
  - ASP.NET / .NET Core (C#), ASP.NET Web API
  - SQL Server, Azure SQL, Cosmos DB
  - Angular/React, modern responsive UI
- **API development & systems integration**
  - REST/JSON APIs, integration wrappers for legacy systems
  - Data workflows and messaging between government and external systems
  - Logging, monitoring, and CI/CD (Azure DevOps)
- **CMS & content platforms**
  - .NET-based CMS including Sitefinity
  - Custom modules, headless setups, and integration with enterprise systems
- **Data, GIS, and calculators**
  - Dashboards and reporting UIs
  - Complex rules-driven calculators and eligibility-style tools
  - Integrations with geospatial/GIS data and mapping UIs

## DIFFERENTIATORS

- Small, senior "pod" model: 2–6 senior engineers + PM/QA; high signal, minimal overhead.
- Mission-focused: Most of our work supports government, public health, environment/energy, and social services.
- Integration & compliance mindset: Used to secure environments, data stewardship, and accessibility considerations.
- Accessibility partners on call (including established accessibility consultancies) to support WCAG/Section 508 compliance.

## REPRESENTATIVE PAST PERFORMANCE

### FEMA-integrated GIS web experience

Integrated live FEMA flood-zone data into a responsive web application enabling real-time location lookup and eligibility/quote workflows, heavily used on mobile devices.

### Healthcare logistics portal (CDC & state/local integrations)

Built an order management portal that automated 140,000+ orders (test kits and supplies), integrated with CDC and multiple state and local health departments, and increased capacity by ~500%.

### Complex rules-driven decision support tools

Implemented web-based evaluation and comparison tools (e.g., Medicare plan evaluation) using ASP.NET + Angular + Azure, including complex business rules, PDF/email outputs, and secure data storage.

### GIS-enabled monitoring and operations

Delivered a web/mobile system that integrated GIS and near real-time remote equipment data to support operational decisions for energy/water programs, helping unlock additional public funding.

## "WE CAN OWN THIS WORKSTREAM" EXAMPLES

- Portal/module modernization on FAA cloud (.NET + Angular/React)
- API & integration layer for legacy FAA systems into cloud architectures
- Data/analytics & mapping UIs (dashboards, calculators, GIS front-ends)
